

Azwar Waqar

Associate Data Scientist

Data-focused Artificial Intelligence graduate with over a year of practical experience designing scalable data pipelines, predictive models, and intelligent backend systems. Bridging GenAI architectures with core data science workflows at NCAI (UET Lahore), I specialize in extracting actionable insights from complex datasets using Python, Scikit-learn, and vector databases. Driven to leverage statistical analysis and machine learning to deliver high-impact, data-driven solutions in a fast-paced environment.

EDUCATION

BS Artificial Intelligence
Superior University, Lahore
Aug, 2022 - May, 2026

CERTIFICATIONS

IBM Data Science Professional Certificate
IBM

Supervised Learning with Scikit-learn
DataCamp

WORK EXPERIENCE

Generative AI Intern
NCAI, KICS, UET Lahore
Extracted, cleaned, and processed complex unstructured datasets to build scalable data pipelines for machine learning applications. Applied machine learning techniques and vector databases to perform data mining and optimize information retrieval accuracy. Collaborated with cross-functional research teams to analyze specific data needs and deliver technical solutions that improve operational efficiency.
Jun, 2026 - Aug, 2026

Associate AI Engineer
Dezital Technologies
Engineered data-driven backend systems and predictive models for outsourced client solutions using Python, Scikit-learn, and Pandas. Developed custom scripts to clean raw datasets, perform exploratory data analysis (EDA), and build scalable data pipelines. Established robust workflows that translated complex business requirements into high-performance AI applications, directly improving operational efficiency.
Nov, 2025 - May, 2026

SKILLS

- Python (Pandas, NumPy, Scikit-learn)
- Statistical Analysis
- Data Preprocessing
- Predictive Modeling
- LLM Integration
- Exploratory Data Analysis
- NLP & LLMs
- Data Mining
- Vector Databases

PROJECTS

KMI-30 Quantitative Stock Exchange Agent
Engineered an automated data pipeline ingesting live PSX market telemetry, corporate earnings reports, and financial news feeds to perform comprehensive multi-source sentiment analysis. Developed NLP predictive models utilizing Python and quantitative modeling to deliver actionable equity signals and real-time market intelligence for KMI-30 index equities.

Educational RAG Engine (HEC / HSSC)
Architected a multimodal Retrieval-Augmented Generation (RAG) pipeline using Python to process complex academic curricula, enabling high-precision extraction of coupled text and scientific image data. Orchestrated semantic search capabilities utilizing ChromaDB and BGE vector embeddings, significantly optimizing contextual retrieval latency and minimizing AI hallucination rates.

WorkSphere (NCAI Labs Management)
Developed a comprehensive full-stack application leveraging Next.js and RESTful APIs to manage complex lab infrastructure and employee workflows. Engineered secure relational database schemas with robust role-based access controls to facilitate seamless attendance monitoring, real-time task delegation, and comprehensive operational analytics.
