

Azwar Waqar

AI Engineer

Artificial Intelligence graduate with industry experience engineering autonomous agent workflows, RAG pipelines, and production backend systems. Bridging GenAI architectures with scalable backend development at NCAI and Dezital Technologies, I specialize in building data ingestion scrapers, REST APIs, and tool-calling integrations using Python, FastAPI, and PostgreSQL. Driven to leverage LLMs and structured automation to deliver high-reliability, data-driven solutions in fast-paced environments.

EDUCATION

BS Artificial Intelligence

Superior University, Lahore
2022 - 2026

CERTIFICATIONS

IBM Data Science Professional Certificate

IBM

Supervised Learning with Scikit-learn

DataCamp

WORK EXPERIENCE

Generative AI Intern

NCAI, KICS, UET Lahore

Developed specialized AI applications for external partners including the HEC, engineering multimodal RAG pipelines for academic curriculum retrieval. Built end-to-end data ingestion engines and tool-calling routines to process complex unstructured documents using vector databases and dense embeddings. Contributed to internal lab platforms and collaborative research projects, optimizing API retrieval latency and minimizing output hallucinations
Jun, 2026 - Sep, 2026

Associate AI Engineer

Dezital Technologies

Built backend services and RESTful APIs using Python, FastAPI, and PostgreSQL for client production deployments. Developed automated web scrapers and data ingestion pipelines using Playwright and BeautifulSoup to clean and structure raw multi-source data. Integrated LLM-driven automation into internal workflows, utilizing structured outputs and Pydantic validation to enforce reliability.
Nov, 2025 - May, 2026

SKILLS

Python (FastAPI, Django)

PostgreSQL & Pandas

LangGraph & AI Agents

Tool & Function Calling

RAG & Vector DBs

LLM Integrations

Structured Outputs (Pydantic)

Git & CI/CD

Docker

Web Scraping (Playwright, Scrapy)

PROJECTS

KMI-30 Quantitative Stock Exchange Agent

Automated PSX and earnings data ingestion via Python web scrapers to power continuous analytics. Engineered NLP predictive models delivering structured sentiment signals for real-time equity tracking. Implemented Pandas data validation rules and relational storage to prevent corrupted analytical inputs.

Educational RAG Engine (HEC / HSSC)

Architected a multimodal RAG pipeline using Python, ChromaDB, and BGE vector embeddings to semantically extract paired text and anatomical diagrams. Enforced deterministic JSON schemas and Pydantic validation on model responses to eliminate hallucinations and standardize outputs for frontend consumption.

WorkSphere (NCAI Labs Management)

Developed a full-stack Next.js and FastAPI lab platform using PostgreSQL schemas with role-based access control. Built background automation workflows for attendance logging, task delegation, and cross-department tracking. Designed normalized database tables and optimized queries to guarantee data integrity and operational analytics.
